Baudot Zero Wall

Baudot Zero Wall is a domed piece, wall mounted to add visual interest and improve acoustics without losing floor space. Available in three diameters, each has an optional ash frame that can be finished in a variety of stains or washes.

Baudot Zero

Baudot Zero is a compact freestanding piece that can be used individually or in clusters to add functional beauty to any large space. The rotating dome diffuses reverberation and noise. It is set on a black powder coated steel stem with a robust Cornish Granite concrete base. Baudot Zero is height adjustable and can be reconfigured to adapt to changing environments and activities.

Baudot Strings

Baudot Strings provide an attractive alternative solution to screening and noticeably improve the acoustics within a space. Constructed from extruded aluminium poles surrounded by foam and fabric, Baudot Strings come in various heights that can be specified in a combination of complementary colours.

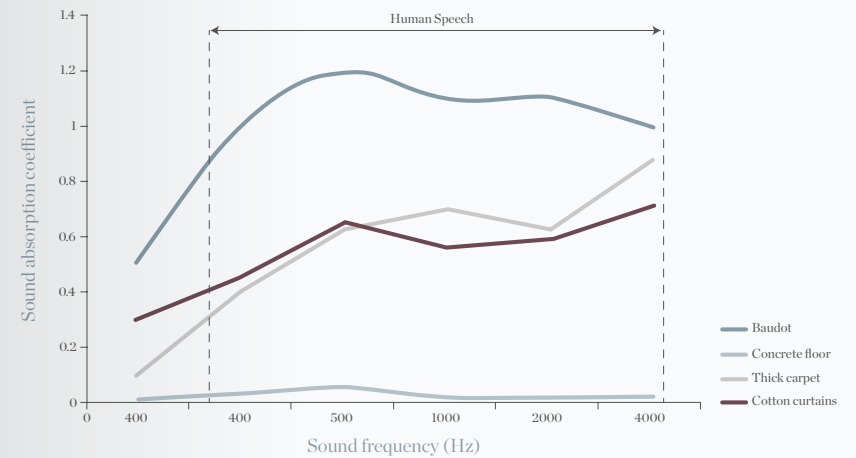

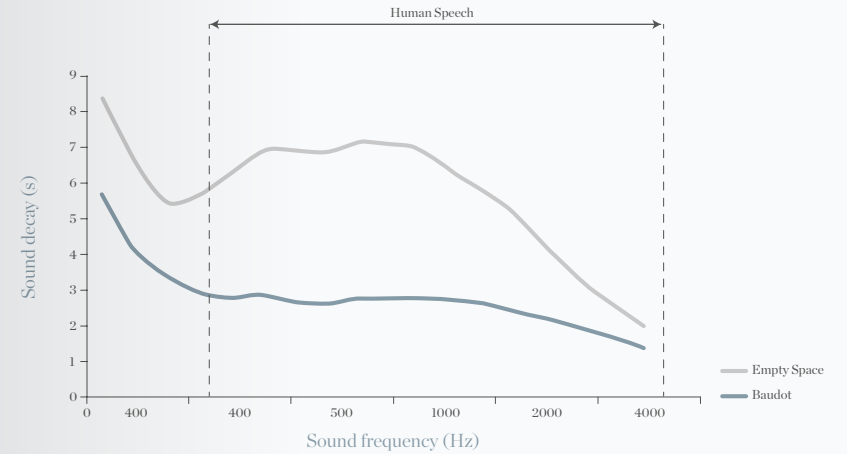

Sound Absorption

As well as making a visual impact on any environment, the Baudot range is also an effective acoustic solution.

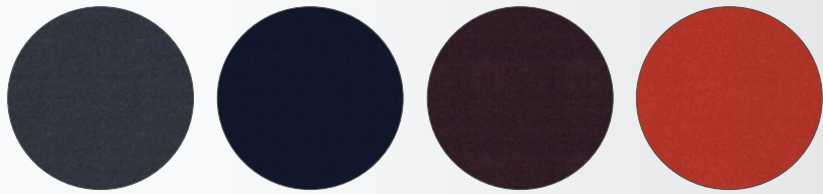

Baudot has been independently tested in an acoustically neutral environment. When tested, Baudot offered significantly superior acoustic absorption, particularly in the range of human speech.

The results also showed an accelerated decay in sound reverberation at various frequencies.

The test was conducted in a purpose built reverberation chamber that had a volume of 221 cubic meters.
